

Education

University of California, Santa Barbara	Santa Barbara, CA	Sept 2021 – June 2024
- B.S. Computer Engineering, GPA: 3.93/4.00, Honors: Regents Scholar, Engineering Honors Program - Activities: UCSB Archery Division (Coach & Secretary), SBHacks (Development Team)		

EXPERIENCE

Software Engineer	Salesforce — Bellevue, WA	Sept 2024 – Present
- Worked on AI Platform: focusing on Einstein Bots and Agent Surface Reasoning teams in an Agile environment - Led a cross-team migration from a legacy token-based authentication system to mutual TLS (mTLS) for Java Spring microservices communicating over HTTP across commercial and air-gapped environments. Improved reliability by reducing authentication overhead and paved the path to deprecate a costly legacy auth system - Wrote integration tests and health checks to ensure service reliability in CI/CD pipelines - Designed and created database models for new features - Built multiple reusable backend service classes in Java, SQL, and Python, adopted by adjacent teams to integrate AI and API-based features into their products. Developed admin tools for production pilot testing and monitoring through Splunk dashboards. - Collaborated across teams for customer issue investigations. Mentored new hires on relevant team stacks		

Software Engineering Intern	Salesforce	June – Sept 2022, June – Sept 2023
- Built Action Center to consolidate alerts on the homepage with designer-defined UI and functionality - Developed custom inputs for air-gapped Government Cloud environments		

Brighter Future Learning Center	Math Tutor — San Jose, CA	Aug 2019 – April 2020
- Mentored students on homework and assignments from Pre-Algebra to Calculus		

PROJECTS

Procedure Tracking System (Senior Capstone)
- Worked in team to create a computer vision plus sensors solution that tracks and guides users' performance through a procedure in a resource-constrained environment - Optimized Computer Vision ML model (YOLOv7, YOLOv7-tiny) by experimenting with image augmentation, fine-tuning, few-shot learning, and edge detectors. Collected and labeled relevant tool data using CVAT - Created scripts on SLURM GPU clusters to pipeline model training and testing - Implemented GUI using Tkinter, and worked with team to test model + GUI integration on Nvidia Jetson Orin

Passport Photo Formatter

- Format user-input image into standard U.S. passport photo dpi, size, and 4" x 6" layout
- Created responsive UI using React.js and Bootstrap with Java Spring backend framework
- Integrated OpenCV face detection to crop input images to face

Web-Scraping File Transferer

- Built a web-scraping application with Selenium and Python Flask to transfer and republish papers between archives

SKILLS

- | | |
|---------------|---|
| - Language: | Java, Python, C++, JavaScript/HTML/XML/CSS
C, Verilog, Assembly (MIPS) |
| - Tools: | Pytorch, Tensorflow, Jupyter, NumPy, Spring, Firebase, Flask, React, Node.js, Tailwind
MATLAB, ModelSim, SPICE |
| - Coursework: | Machine Learning, Computer Vision, Deep Learning, Data Structures and Algorithms, Sensors and Peripheral Design, Digital Design Principle, Networks, Signal Analysis, Analog and Digital Circuits & Systems, Discrete Mathematics, Probability and Statistics, Differential Equation, Linear Algebra, Game Theory |

Miscellaneous Interests: Star Wars, noodle soup, space, writing, foreign languages
